

ST ref board RF component series:
 - small caps: muRata GJM155
 - 68pF caps: muRata GRM155
 - inductors: muRata LQW15AN
 - RF switch: BGS125N6

Notes:

- VBAT connected to VDD to allow internal ADC voltage monitoring
- SH31 alert conn to PC13: WKUP2 (from standby)
- Using only RFO_LP: VDDPA gets 1.55V from VFBSMPS
- Using xtal with thermal barrier, for lower power than tcxo
- Drop reset button ?
- 6-pin vs 8-pin debug conn and 5V vs 3.3V
- need to re-calculate RF component values
